Letter of Transmittal

WORKS PROGRESS ADMINISTRATION,
Washington, D. C., January 1, 1938.

Sir: I herewith transmit the results of a survey of public and private assistance in rural and town areas for the period 1932—1936. The survey was made to provide an indicator of trends in rural and town relief to complement the urban series of relief statistics, recently transferred from the Children's Bureau to the Social Security Board. The report is based on data on expenditures and case loads of agencies granting assistance in 385 sample counties and townships in 36 States. Total relief expenditures for rural and town areas of the United States have been estimated on the basis of the sample.

Aggregate expenditures for the five major types of relief included in the survey increased steadily from 1932 through 1935 and then declined sharply in 1936. Public general assistance was by far the most important type of relief in rural and town areas from 1932 through 1935, accounting for from 68 to 92 percent of all expenditures. It declined markedly after the cessation of Federal Emergency Relief grants in December 1935. In 1936, under the impetus of the Social Security program, public aid to the aged, to the blind, and to dependent children became the most important type of assistance, accounting for 45 percent of all expenditures. Resettlement emergency grants which were inaugurated in November 1935 accounted for approximately 10 percent of all rural and town relief expenditures in 1936. Public veterans' assistance accounted for almost one-seventh of all expenditures in 1932 but was of minor importance in subsequent years. Private assistance was never of great importance during the 5-year period. In general the trends of case loads followed closely the trends of expenditures.

The study was made in the Division of Social Research under the direction of Howard B. Myers, Director of the Division. The data were collected under the supervision of Waller Wynne, Jr. Acknowledgement is made of the cooperation of the personnel of the public and private agencies in the areas surveyed and of the assistance of the State Supervisors and Assistant State Supervisors of Rural Research who were in direct charge of the field work.

The analysis of the data was made under the supervision of T. J. Woofter, Jr., Coordinator of Rural Research. The report was prepared by Waller Wynne, Jr. and was edited by Ellen Winston.

Respectfully submitted.

CORRINGTON GILL,
Assistant Administrator.

HON. HARRY L. HOPKINS,
Works Progress Administrator.

Five Years of Rural Relief

VII

INTRODUCTION

THE STATISTICS presented in this report were gathered in response to frequent expressions of the need for an indicator of the trends in rural and town relief to complement the statistics of relief in cities with a population of 50,000 or more secured from monthly reports to the Social Security Board.[1]

The current reporting of relief statistics in 385 sample counties and New England townships in 36 States[2] was inaugurated as of January 1936 and brought forward by means of monthly reports on expenditures and cases from all agencies in these areas. At the same time statistics of relief for the years 1932, 1933, 1934, and 1935 were compiled in as many of these counties as had reliable records for those years. The result was a rural and town series extending back to January 1932, covering 225 counties and townships in 1932, 270 in 1933, 374 in 1934, 385 in 1935, and 385 in 1936.

Inasmuch as most town agencies operate without regard to limits of incorporation, the statistics cover whole counties, including both the rural and town portions. Thus, this series represents those sections of the population of the United States which live in the open country, in villages, and in towns with populations of from 2,500 to 25,000. All of the New England townships included have populations of less than 5,000.

The sample areas are those selected for studies of rural relief in June and October 1935 except that substitutions have

[1] The urban series was initiated by the Russell Sage Foundation in 1929 and transferred to the Children's Bureau in 1932. Prior to July 1930 monthly relief reports for certain urban areas were also obtained under the project for the registration of social statistics sponsored jointly by the local community research committee of the University of Chicago and the Association of Community Chests and Councils (now Community Chests and Councils, Inc.). This project was transferred to the Children's Bureau, U. S. Department of Labor, in 1930. On July 1, 1936, the urban series was transferred from the Children's Bureau to the Division of Public Assistance Statistics of the Social Security Board. For a description of this series see Winslow, Emma A., *Trends in Different Types of Public and Private Relief in Urban Areas, 1929—35*, Publication 237, U. S. Department of Labor, Children's Bureau, Washington, D. C., 1937.

[2] For a description of the selection of the sample see Appendix B—Methodology of Rural and Town Reporting Series.

been made for counties which contain cities with a population greater than 25,000, and sample counties in Illinois, Indiana, and Mississippi have been added.[3]

The agencies covered include all those which extend aid from public and private funds for general outdoor relief. The types of assistance include public general assistance, public veterans' assistance, public aid to the aged, to the blind, and to dependent children, Resettlement emergency grants, and private assistance. Loans made under the Resettlement and other Government programs and wages paid under the Civil Works Administration and Works Progress Administration are excluded. Expenditures by the agencies include the amount of assistance actually extended to cases during the month, exclusive of administrative costs. They comprise all cash, relief in kind (except surplus commodities), relief orders, and requisitions.

The report which follows presents the general trends of relief expenditures and case loads from January 1932 through December 1936. In addition to the statistics for the several types of relief and the discussion of the trend of each type of assistance, a tabular statement of the trend of each type in the sample counties of individual States is presented for the period during which each State was included in the survey.[4] Tests of the sample[5] show that it has a high degree of reliability as an indicator of relief trends in the rural and town population of the United States as a whole. It must be pointed out, however, that, especially for the smaller programs, the reports may not be representative of individual States, owing to chance factors operating in the sample counties.

Expenditures generally indicate trends more clearly than do case loads since expenditures are unduplicated. The agency reports in this series eliminate duplication of households receiving two types of aid from one agency, but households which received aid from two or more agencies in the same month are duplicated in the case count. It is common during periods of transfer from one agency to another for a case to appear on the books of one agency the first part of the month and of another agency the second part. For this reason no attempt is made to aggregate cases cared for by all programs. The case load figures and amounts per case are presented, however, by specified types of assistance.

SUMMARY

DURING THE 5-year period, 1932—1936, estimated expenditures in rural and town areas of the United States for public general assistance, public veterans' assistance, public aid to the aged, to the blind, and to dependent children, Resettlement emergency grants, and private assistance amounted to slightly more than $1,200,000,000. Expenditures for these types of assistance rose steadily from about $80,000,000 in 1932 to almost $400,000,000 in 1935. During 1936 they decreased sharply to little more than $200,000,000.

The most important type of relief expenditures in rural and town areas during the years 1932—1935 was public general assistance, which amounted to from 68 to 92 percent of the total. In 1936, however, as a result both of the cessation of Federal Emergency Relief Administration grants and the release of funds under the Social Security program, public aid to the aged, to the blind, and to dependent children became the most important type of assistance, accounting for 45 percent of the total rural and town expenditures.

Amounts expended for public general assistance rose rapidly from $54,000,000 in 1932 to $353,000,000 in 1935 and then dropped to only $81,000,000 in the following year. Special assistance to veterans varied widely in relative importance during the 5-year period. It amounted to 14 percent of the total expenditures for public and private assistance in 1932 but dropped to less than 3 percent in 1934 and 1935 and then rose to 4 percent in 1936. In each year included in the study, more than three-fourths of the total annual expenditures of agencies administering special assistance to veterans were made in 12 Southern States.

Expenditures for public aid to the aged, to the blind, and to dependent children received a tremendous impetus in 1936 as a result of the Federal Social Security Act which made funds for these groups available to the States. Such expenditures in rural and town areas increased from less than $13,000,000 in 1932

to more than $91,000,000 in 1936. Among the three types expenditures for aid to dependent children were by far the most important in 1932, but by 1936 aid to the aged had increased to the point where it represented 85 percent of all expenditures. Amounts expended for aid to the blind increased slowly throughout the period.

The Resettlement emergency grant program was initiated in November 1935. Expenditures reached a peak in January 1936 when emergency grants constituted nearly 17 percent of combined relief expenditures. They then declined rapidly through July, after which the drought of 1936 caused a further expansion of grant activities. The major part of the expenditures for the emergency grant program was in nine Great Plains States which suffered most acutely from drought.

Expenditures for private assistance were very limited throughout the years 1932—1936 in comparison with expenditures for public relief. They reached a peak for the 5 years in 1933, when they amounted to approximately $2,600,000, and were slightly lower in 1936 than in any of the preceding years covered by the study. Such expenditures were normally most important in December, reflecting the Christmas activities of private agencies.

The average monthly case load for public general assistance reached a peak in 1934 when it included 1,837,000 rural and town cases. The number of cases receiving public aid to the aged, to the blind, and to dependent children rose so rapidly as a result of the Federal Social Security program that the combined monthly case load for these three types of aid increased more than 700 percent from 1932 to 1936. By 1936 the average monthly case load was more than 490,000. Cases assisted under the Resettlement emergency grant program increased or declined with the fluctuations in farm distress. The peak case load was reported for January 1936 when an estimated 159,000 cases received emergency grants. Like expenditures, the case loads of private agencies were never large. The peak average monthly load for the 5-year period was reached in 1933 and amounted to only 65,000 families and single persons.

Average monthly benefits per case were higher for public veterans' assistance than for other types of relief in rural and town areas in each of the years studied, while benefits for private assistance were by far the lowest. Average monthly benefits per case for public general assistance rose from a low of $9.50 in 1933 to a high of $16.20 in 1935 and then declined in 1936 with the cessation of Federal funds for general relief. The effect of funds provided under the Social Security program was seen in the fact that the highest average benefits to the aged, to the blind, and to dependent children were reported in the closing months of 1936. With the exception of 1932, average monthly benefits per case were higher throughout the 5-year

period for aid to the blind than for aid either to the aged or to dependent children. Benefits paid under the Resettlement emergency grant program reflected seasonal variations in relief needs, being highest during the winter months and declining during the spring and summer. While average monthly benefits for private assistance were uniformly low, averaging only $3.30 at their peak in 1933, such benefits were frequently only supplementary to other types of relief.

Chapter I

AGGREGATE EXPENDITURES FOR RURAL AND TOWN RELIEF, 1932—1936

AGGREGATE EXPENDITURES in rural and town areas of the United States for five major forms of relief—public general assistance, public veterans' assistance, public aid to the aged, to the blind, and to dependent children, Resettlement emergency grants, and private assistance—amounted to an estimated total of $1,212,000,000 during the 5-year period 1932—1936 (table 1 and fig. 1).

[1] Resettlement emergency grant program initiated November 1935.

Starting near the low point for the 5-year period, expenditures for the types of assistance included in the survey rose steadily with only minor fluctuations from January 1932 through January 1935 (table 2). Beginning in February 1935 expenditures dropped steadily until the summer of 1936, reflecting improvement in business conditions, transfers of general relief cases to the rural rehabilitation program, and, after the summer of 1935, the transfer of cases from direct relief to the Works Program. In July 1936 the downward trend was reversed, and a new drought, among other factors, caused a rise in relief expenditures which continued steadily to the end of the year.

In 1932 aggregate expenditures for public general assistance, public veterans' assistance, public aid to the aged, to the blind,

Source: Table 1. AF-2535, W.P.A.

and to dependent children, and private assistance[1] amounted to an estimated $80,195,000 (table 1). Public general assistance accounted for the bulk of the expenditures (68 percent). Public veterans' assistance amounted to 14 percent of the total, public aid to the aged, to the blind, and to dependent children amounted to 15 percent, and private assistance to less than 3 percent.

In 1933 estimated aggregate expenditures for these types of aid rose approximately 143 percent, totaling $195,147,000. The sharp rise was accounted for largely by the inauguration of the Federal Emergency Relief Administration program in May of that year. In 1934 aggregate expenditures again rose sharply as the FERA program cared for an increasing number of rural-town families, as severe drought increased rural need, and as emergency work programs, with their larger benefits, began to be substituted for direct relief.

Total estimated expenditures for 1934 were $338,267,000, representing an increase of 73 percent over the preceding year. Relief expenditures in both 1933 and 1934 would have been even

[1] The Resettlement emergency grant program was not initiated until November 1935.

83988 O—38—2

greater but for the Civil Works program, which took many workers off relief from about the middle of November 1933 through February 1934.

In both 1933 and 1934 estimated expenditures for public general assistance rose in relative importance, making up somewhat more than five-sixths of the total in 1933 and slightly more than nine-tenths in 1934. Private assistance accounted for only 1 percent of the total in 1933 and less than one-half of 1 percent in 1934. Public aid to the aged, to the blind, and to dependent children also dropped in relative importance, accounting for less than 8 percent of the total in 1933 and for only 5 percent in 1934. Public veterans' assistance dropped even more sharply, from 14 percent of the total in 1932 to 5 percent in 1933 and to 3 percent in 1934.

In 1935 aggregate expenditures for five major forms of relief, including Resettlement emergency grants (which were made for the first time in November 1935), continued to climb, mounting to an estimated $396,971,000. As in the preceding 3 years, public general assistance constituted the bulk of the aggregate expenditures.

The year 1935 marked the peak in expenditures for the 5-year period. The high point in monthly relief expenditures was reached in January of that year. Thereafter expenditures declined sharply (fig. 2). The decrease was caused partly by the transfer of many farm families from general relief to the rural rehabilitation loan program (not included in the present series) during the spring months. After July 1935 workers from relief rolls were gradually employed by the Works Progress Administration and other Works Program agencies. Economic recovery, reducing the need for relief, also played a part in the decrease in expenditures.

In 1936 expenditures dropped to an estimated $201,077,000, substantially below the 1934 and 1935 levels and only slightly above the 1933 level. The sharp reduction, which occurred in spite of increased expenditures during the fall and winter months as a result of drought, reflects the cessation of Federal funds for general relief, which were available through the Federal Emergency Relief Administration until the end of 1935.[2]

The proportion of aggregate amounts expended for public general assistance fell to 40 percent for the year. In contrast the proportion for public aid to the aged, to the blind, and to dependent children rose sharply to 45 percent as Federal funds became available under the Social Security Act to States with plans approved by the Social Security Board. Resettlement emergency grants accounted for 10 percent of the total, public vet-

[2] For percent distribution of estimated expenditures by months see appendix table 39.

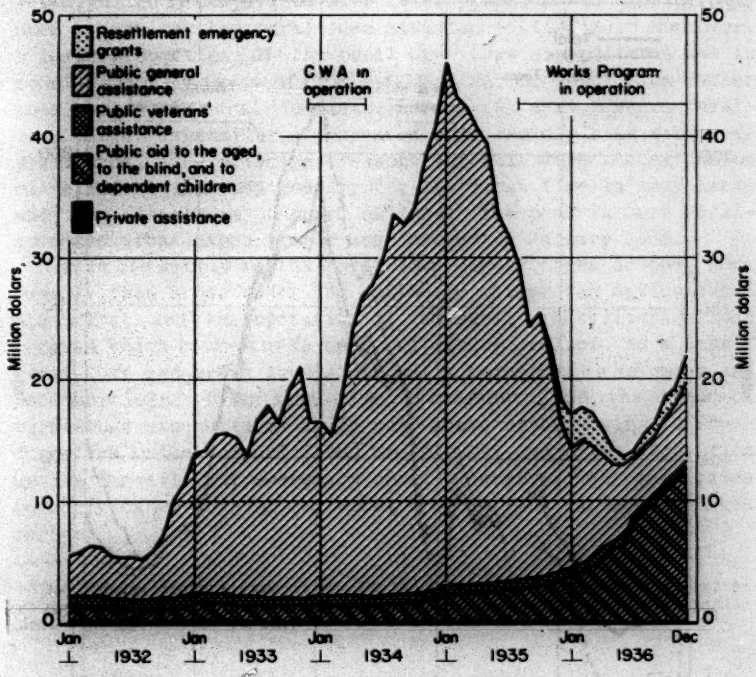

FIG. 2-EXPENDITURES FOR RELIEF IN RURAL AND TOWN AREAS, BY TYPE OF ASSISTANCE (Estimated) 1932-1936

Source: Table 2

AF-2537, W.P.A.

erans' assistance for 4 percent, and private assistance for less than 1 percent. The substantial increases in amounts expended for public aid to the aged, to the blind, and to dependent children and for Resettlement emergency grants did not offset the marked decrease in amounts expended for public general assistance.

RURAL-TOWN AND URBAN EXPENDITURES COMPARED

Urban expenditures for relief in the United States have been far greater than rural-town expenditures. Of the estimated average monthly expenditure of $88,000,000 for the year July 1935—June 1936, 77 percent was expended in urban areas and only 23 percent in rural-town areas although 46 percent of the 1930 population resided in rural-town areas.[3]

Rural and town relief was relatively undeveloped in 1932, the first year of the present series. While urban relief[4] was also

[4]Data on urban relief are from a sample series of 120 urban areas. See Winslow, Emma A., *Trends in Different Types of Public and Private Relief in Urban Areas, 1929—35*, Publication 237, U. S. Department of Labor, Children's Bureau, Washington, D. C., 1937.

very limited in comparison with later years, it was considerably more extensive than rural-town assistance (fig. 3).[5] Moreover, a large proportion of the rural and town expenditures was in counties having towns of from 5,000 to 25,000 population rather than in strictly rural districts. During the next 2 years rural-town relief expenditures increased more rapidly than urban expenditures. The principal reasons for this were the extension of relief to the open country for the first time in many areas and the disastrous drought of 1934. The peak in both rural-town and urban expenditures was reached in January 1935.

During the next 9 months rural-town expenditures dropped more rapidly than urban under the influence of improved agricultural conditions and the operation of the rural rehabilitation loan program which took many farmers off general relief. As a result rural-town and urban trends virtually coincided in November and December 1935. From that time throughout 1936 the trend of rural-town expenditures again rose above urban, owing to fresh disasters in the form of flood and drought and to the absorption by the Resettlement emergency grant program of many farm cases formerly cared for by the Works Program (not included in this series).

[5] The average monthly expenditure for the year July 1935—June 1936 represents 100 percent. The series of index numbers shows the relative expenditures over the 5-year period.

Chapter II

TRENDS IN EXPENDITURES AND CASE LOADS

THE TRENDS in both expenditures and case loads in rural-town areas largely reflected changes in the volume of public general assistance during the years 1932 through 1935. In 1936, however, assistance extended under the provisions of the Social Security Act and under the Resettlement emergency grant program became important components of the total relief picture. It is the purpose of this chapter to describe briefly the trends in expenditures and case loads for each of the five major types of assistance included in the series.

Wage or loan assistance extended under the Civil Works program of 1933—34, the rural rehabilitation loan program beginning in 1934, and the Works Program beginning in 1935 are not included in the relief totals here presented. These programs must be constantly kept in mind, however, in considering trends. They were often responsible for fluctuations in the general relief trend as families were transferred back and forth between relief agencies and these wage assistance and loan programs.

PUBLIC GENERAL ASSISTANCE

During the years 1932—1935 public general assistance was the most important type of relief in rural and town areas. This type of aid included all relief extended from public funds to resident families or single persons in their homes, except statutory relief to special classes, such as the aged, the blind, dependent children, and veterans. The most common forms of public general assistance were outdoor poor relief and general emergency or unemployment relief, including both direct (home) and work relief. Funds for general public relief were secured from county, State, and Federal sources and were raised primarily through taxation and borrowing. Agencies administering public general relief in this period were: emergency relief agencies, departments of public welfare, county commissioners,

township trustees, county courts, commissioners of the poor, and other similar authorities.

During the first 6 months of 1932 expenditures for public general assistance were entirely from State and local funds. Federal funds for unemployment relief first became available in July 1932 when Congress authorized the Reconstruction Finance Corporation to make loans to State and local governments. In May 1933 the Federal Emergency Relief Administration was organized to make direct grants to the States for the needy unemployed. Final FERA grants were determined in December 1935, and general relief again became entirely a State and local responsibility.

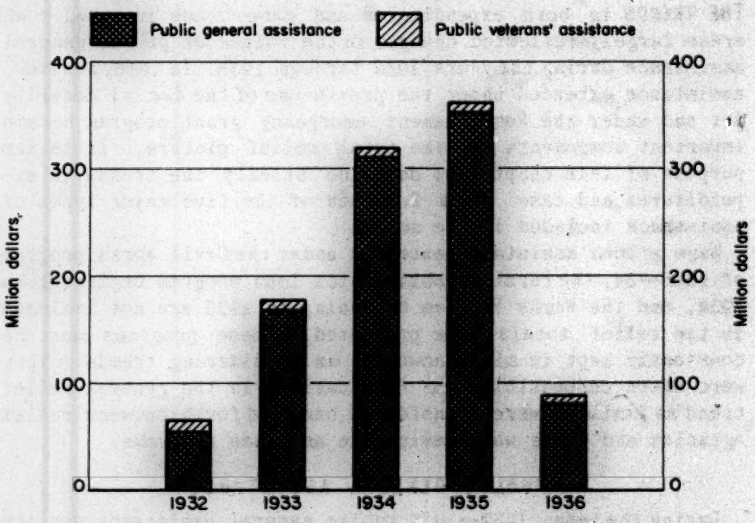

FIG. 4 - EXPENDITURES FOR PUBLIC GENERAL AND VETERANS' ASSISTANCE IN RURAL AND TOWN AREAS (Estimated) 1932 - 1936

Source: Table I. AF-2541, W.P.A.

Expenditures

During the 5 years, 1932—1936, total estimated expenditures for public general assistance in rural and town areas amounted to $966,000,000. In 1932 such expenditures for assistance amounted to $54,493,000 (table 1 and fig. 4). In 1933 they rose sharply to $168,099,000, reflecting the rapid growth of distress and the consequent entrance of the Federal Emergency Relief Administration into the field of unemployment relief. Expenditures

increased markedly again in 1934, amounting to $309,893,000, and more slowly in 1935 when $352,900,000 were expended. The year 1935 marked the peak in annual expenditures for this type of aid. Reflecting the virtual cessation of Federal funds for unemployment relief in 1935, as the Works Progress Administration gradually assumed responsibility for workers on relief rolls, amounts expended for public general assistance fell sharply to $80,592,000 in 1936, representing a decline of about 77 percent from the 1935 level.

Since the total expenditures for relief in 1932, 1933, 1934, and most of 1935 largely represented expenditures for public general assistance, the fluctuations in the trend of expenditures for this type of aid during these years followed closely the general trend for aggregate relief expenditures described in chapter I (table 3 and fig.5). In the latter part of 1935 public general assistance became progressively less important in the total relief picture as States expanded their programs for aid to the aged, to the blind, and to dependent children in anticipation of receiving Federal funds for these cases under the Social Security Act and as Resettlement emergency grants were introduced.

Hence, beginning in November 1935 the trend of expenditures for public general assistance began to show marked variations from the trend of aggregate expenditures. The drop was much sharper to July 1936 and the rise which began at that time was less marked than that of aggregate expenditures for the five types of assistance combined.

Case Loads

The estimated average monthly number of cases receiving public general assistance in rural and town areas in 1932 was 454,000 (table 4 and fig. 6). This number was more than tripled in 1933, reaching 1,478,800. The average monthly case load was at a peak in 1934 when 1,837,200 rural and town cases were assisted. The average monthly number of cases dropped slightly to 1,813,700 in 1935 and declined markedly in 1936, falling to 536,300. This latter decline represented a decrease of 70 percent from 1935.

The estimated number of cases receiving public general assistance was lower in January 1932 than in any other month during the 5 years included in the study (table 5). The number rose in February and remained fairly constant until November 1932 when a seasonal rise lasting through March 1933 occurred. The case load fluctuated considerably during the spring and summer months and then reached a peak in November 1933. During the winter months of 1933—34 case loads were reduced by the CWA program. Beginning in January 1934, however, the curve for cases

Source: Table 4. AF-2548, W.R.A.

was steadily upward through August as the drought of that year became progressively more serious. The winter of 1934—35 again saw an important rise, the high peak for the 5-year period being reached in January 1935 when the case load totaled 2,349,000. After January 1935 the trend in cases was steadily downward through October 1936. During the last 2 months of 1936 the curve for general assistance cases was again slightly upward (table 6 and fig. 7).[1]

[1]The average number assisted per month in the year July 1935—June 1936 represents 100 percent. The series of index numbers in table 6 shows the relative size of the case load over the 5-year period.

AF-2567, W.P.A.

PUBLIC VETERANS' ASSISTANCE

The term *public veterans' assistance* refers to statutory aid to veterans and their dependents (exclusive of institutional care) in accordance with the provisions of a State law authorizing such aid from public funds. It does not include payments to veterans and their dependents from funds not specifically appropriated under the law for veterans' assistance.

Estimated expenditures for public aid to veterans amounted to $11,112,000 in 1932 and dropped to $9,447,000 in 1933 (table 1). They remained nearly constant in 1934 and 1935 and then dropped to $7,952,000 in 1936. The relative uniformity in expenditures and case loads throughout most of the period surveyed is shown in figure 8.

[1] Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, Tennessee, Texas, and Virginia. South Carolina is excluded because comparable data were not available.

In each of the 5 years included in the study more than three-fourths of the annual expenditures for public aid to veterans were made in 12 Southern States[2] and consisted primarily of assistance to Confederate veterans (table 7).

PUBLIC AID TO THE AGED, TO THE BLIND, AND TO DEPENDENT CHILDREN

Public aid to the aged, to the blind, and to dependent children includes assistance granted from public funds to aged persons, blind persons, and dependent children under the provisions of State laws. These three types of public assistance, which are also known as *categorical assistance*, are financed from local, State, and Federal funds. Federal funds first became available for categorical assistance in 1936 when the Social Security Act became operative. In terms of expenditures this type of assistance ranked second to public general assistance in relative importance among the five types included in the study for the years 1932 through 1935, but in 1936 it became the most important type.

Expenditures

Total expenditures for public aid to the aged, to the blind, and to dependent children during the 5-year period surveyed amounted to only $167,000,000, and more than one-half of this amount was expended in 1936. In 1932 public expenditures for these three types of aid amounted to an estimated total of only $12,376,000 (table 1 and fig. 9). Expenditures rose to $15,032,000 in 1933, to $17,464,000 in 1934, and to $30,832,000 in 1935.

In 1936, under the impetus of the Federal Social Security Act, there was a rapid expansion of assistance to the aged, to the blind, and to dependent children (table 3 and fig. 10). Expenditures increased approximately 200 percent over the preceding

[2] Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, Tennessee, Texas, and Virginia. South Carolina is excluded because comparable data were not available.

year, amounting to an estimated $91,219,000. In 1936 they constituted 45 percent of the aggregate expenditures for the five types of relief included in this study.

From 1932 to 1935 aid to the aged became progressively more important, and aid to dependent children decreased proportionately. Of the total amounts expended for public aid to the aged, to the blind, and to dependent children in rural and town areas during 1932, somewhat more than three-fifths was for aid to dependent children and less than one-fourth for aid to the aged (table 8). During 1933 the proportion for aid to the aged increased to over two-fifths while the proportion for aid to dependent children dropped to less than one-half of the total expenditures for the three classes. This shift in relative importance was due both to an increase in expenditures for aid to the aged and to a decrease in amounts expended for aid to dependent children. In 1934 aid to the aged increased again while aid to dependent children continued to decrease with the result that aid to the aged constituted one-half of the total amount expended and aid to dependent children less than two-fifths. In anticipation of Federal funds for assistance expenditures for the aged and for dependent children both increased during 1935, but the rate of increase in expenditures for the aged was much

Table 8.—Estimated Annual Expenditures for Public Aid to the Aged, to the Blind, and to Dependent Children in Rural and Town Areas, 1932—1936

[Expenditures in thousands; 000 omitted]

Year	Total		Aid to the aged		Aid to the blind		Aid to dependent children	
	Amount	Percent	Amount	Percent	Amount	Percent	Amount	Percent
1932	$12,376	100.0	$2,978	24.1	$1,812	14.6	$7,586	61.3
1933	15,032	100.0	6,239	41.5	2,067	13.9	6,726	44.7
1934	17,464	100.0	8,757	50.1	2,443	14.0	6,264	35.9
1935	30,832	100.0	21,519	69.8	2,383	7.7	6,930	22.5
1936	91,219	100.0	77,168	84.6	3,047	3.3	11,004	12.1

sharper than the increase in expenditures for dependent children. As a result, the proportion expended for the aged increased to seven-tenths while the proportion for aid to dependent children fell to less than one-fourth of the total. In 1936 there was a rapid expansion in this field, especially in assistance to the aged, as the Federal Social Security program came into wider operation. In this year the proportion of expenditures for the aged was nearly 85 percent of the total, and only 12 percent of the total was for dependent children.[3]

Expenditures for aid to the blind were of relatively little importance during each of the years 1932—1936. Throughout the period, however, the total amounts expended slowly increased.

Case Loads

The average monthly number of cases receiving aid to the aged, to the blind, and to dependent children in rural and town areas rose from 57,800 in 1932 to 490,300 in 1936, an increase of more than 700 percent (table 4 and fig. 11). Prior to 1936, when a tremendous expansion resulted from the development of the Federal Social Security program, the average monthly number of cases had advanced gradually from year to year. The number of cases receiving aid to the aged, to the blind, and to dependent children remained fairly constant throughout 1932 (table 6 and fig. 10). After an increase in January 1933 the case load again became relatively constant. From January 1934, however, the curve for cases rose steadily through 1934 and 1935 and then rapidly during 1936 when Federal funds became available. However, the case load did not increase as rapidly as expenditures during the latter half of 1936 due to the rise in the average grant per case.

RESETTLEMENT EMERGENCY GRANTS

The Resettlement Administration's emergency grant program was initiated in November 1935 to provide for the human subsistence needs of farm families living in stricken agricultural areas.

---

[3] For estimated expenditures by months and their percent distribution see appendix tables 40 and 41.

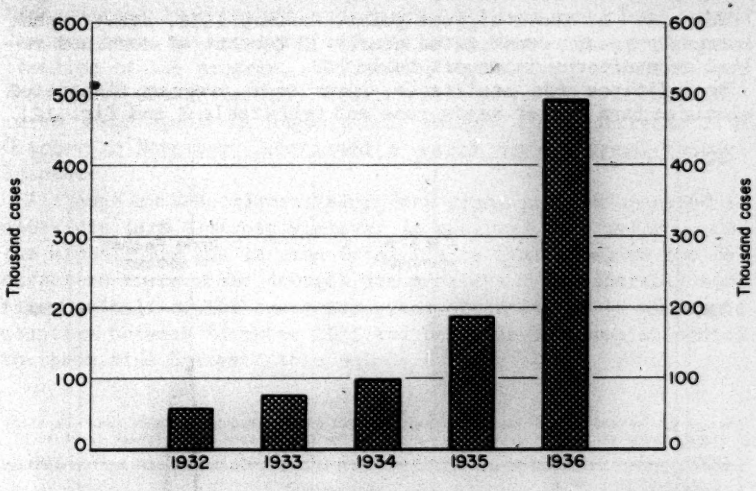

FIG. II - AVERAGE MONTHLY NUMBER OF CASES RECEIVING PUBLIC AID TO THE AGED, TO THE BLIND, AND TO DEPENDENT CHILDREN IN RURAL AND TOWN AREAS (Estimated)
1932 - 1936

Source: Table 4. AF-2555, W.P.A.

All expenditures under this program have been from Federal funds. Emergency grants were made to four types of farm families: "(1) potential rehabilitation cases for whom standard farm plans could not be approved in time to meet emergency needs; (2) rehabilitation standard-loan clients who were in need of assistance to meet unexpected emergencies; (3) families who needed assistance for only a short time because of some catastrophe; and (4) needy families for whom there was little immediate chance of permanent rehabilitation because of economic or other limitation but who, because they rely primarily on agriculture for their livelihood, were best aided through the Resettlement Administration."[4]

Expenditures

In the 14 months from November 1935 through December 1936, estimated expenditures for Resettlement emergency grants amounted to $22,364,000,[5] averaging approximately $1,600,000 per month

[4] *Report on Progress of the Works Program, March 1937*, Division of Research, Statistics, and Records, Works Progress Administration, Washington, D. C., p. 111.

[5] Figures given here for Resettlement emergency grants vary somewhat from figures published by the Resettlement Administration, owing to the fact that figures published here are on the basis of payments made, whereas Resettlement figures are on the basis of grants certified.

(table 1). At their highest point, January 1936, Resettlement emergency grants constituted nearly 17 percent of combined relief expenditures (appendix table 39).

Expenditures for assistance under this program fluctuated widely as farm relief needs rose and fell (table 3 and fig. 12).

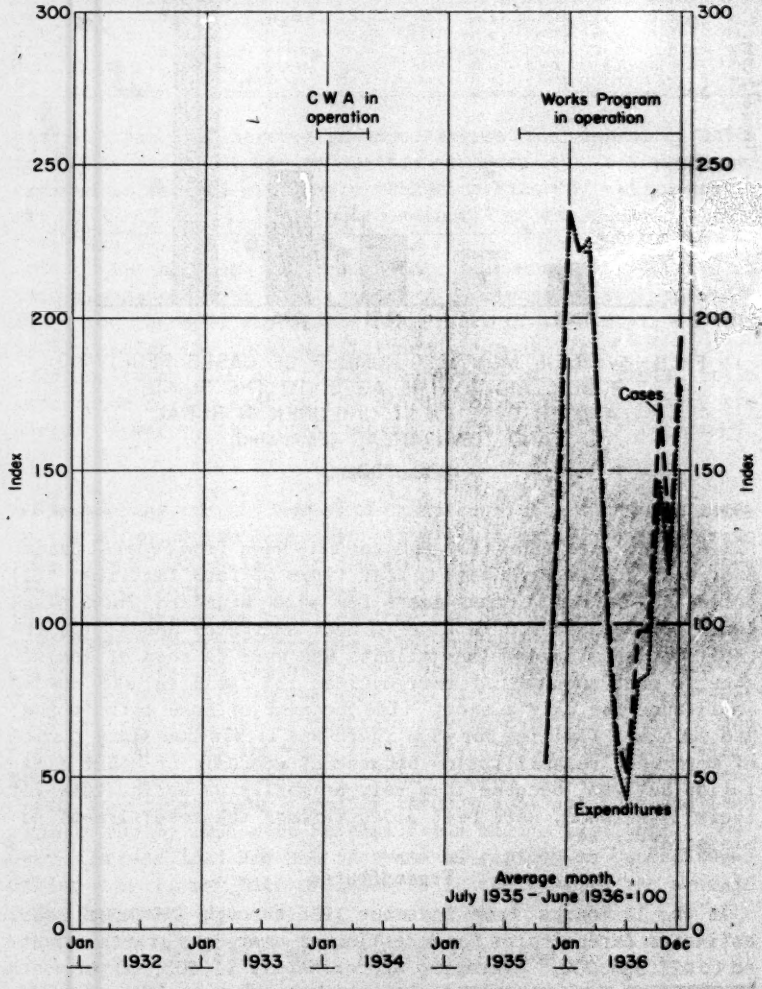

FIG. 12 - RESETTLEMENT EMERGENCY GRANTS — TRENDS OF CASES AND EXPENDITURES IN RURAL AND TOWN AREAS
November 1935 - December 1936

Source: Tables 3 and 6.

AF-2201, W.P.A.

Expenditures in February and March 1936 remained close to the January peak, but beginning in April 1936 there was a rapid contraction of the program. Reflecting needs which resulted from the severe drought of 1936, Resettlement emergency grant expenditures rose again in August and, except for a decrease from October to November, continued a rapid upward trend through December.

Although the Resettlement emergency grant program operated to alleviate farm distress wherever it occurred, the major part of the expenditure was in nine Great Plains States[6] where the destructive force of the drought was greatest. Considerably more than one-half of the emergency grant expenditures in the sample counties between November 1935 and December 1936 was allocated to these nine States (table 9).

Table 9.—Resettlement Emergency Grant Expenditures in 9 Great Plains States[1] as Percent of Total Resettlement Emergency Grant Expenditures, November 1935—December 1936[2]

October	74.3
November	70.2
December	65.9

[1]Colorado, Iowa, Kansas, Montana, Nebraska, North Dakota, Oklahoma, South Dakota, and Texas.
[2]Based on sample counties.

Case Loads

The estimated number of families and single persons receiving Resettlement emergency grants ranged from 35,000 in July 1936 to 159,000 in January 1936 (table 5). The average number assisted monthly between November 1935 and December 1936 was about 94,000. The trend of Resettlement emergency grant cases followed closely the trend of grant payments (fig. 12).

PRIVATE ASSISTANCE

Private assistance includes all relief extended by private welfare agencies to families and unattached persons in their

[6]Colorado, Iowa, Kansas, Montana, Nebraska, North Dakota, Oklahoma, South Dakota, and Texas.

homes. Such agencies are financed primarily by voluntary contributions and by endowments. Among the organizations administering private relief in rural and town areas are nonsectarian and sectarian family societies, the American Red Cross, and the Salvation Army.[7]

Expenditures

Expenditures from private funds played a relatively insignificant role in meeting relief needs in rural and town areas during the years 1932—1936, amounting to only $9,272,000 for the 5-year period. Estimated expenditures from this source totaled $2,214,000 in 1932 (table 1 and fig. 13). Amounts expended for

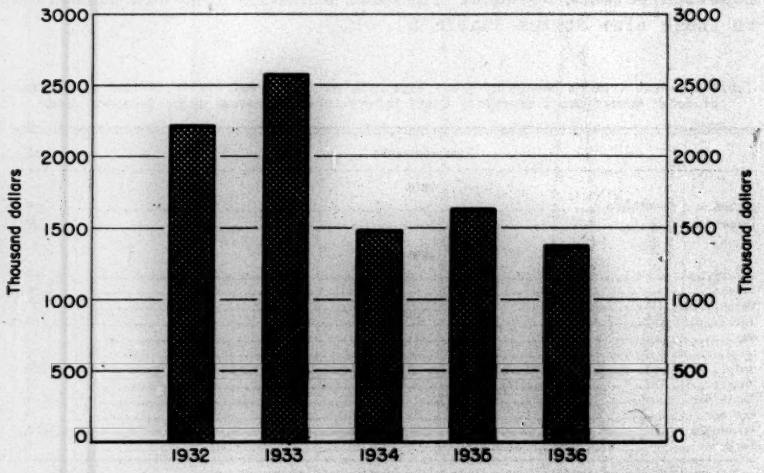

FIG. 13 - EXPENDITURES FOR PRIVATE ASSISTANCE IN RURAL AND TOWN AREAS (Estimated)
1932 - 1936

Source: Table 1. AF-2559, W.P.A.

private assistance rose to $2,569,000 in 1933 but in the succeeding 3 years were well under this amount, totaling $1,482,000 in 1934, $1,630,000 in 1935, and $1,377,000 in 1936.

The major part of the expenditures for private assistance was for aid to families and single persons living in towns rather than in rural areas. In each of the 5 years covered by the study, from 70 to 80 percent of the annual expenditures for this type of relief were made in counties containing towns of 5,000 to 25,000 population.

[7] Expenditures by private agencies for institutional care, foster home care, and transient care in shelters and camps are excluded from this report.

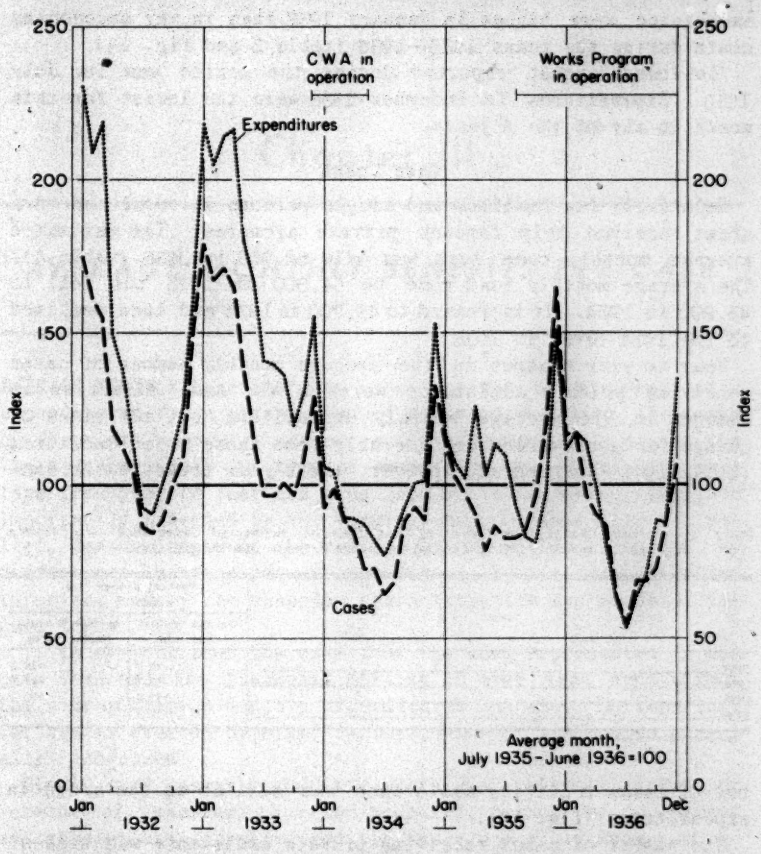

FIG. 14 - PRIVATE ASSISTANCE - TRENDS OF CASES AND EXPENDITURES IN RURAL AND TOWN AREAS 1932 - 1936

Source: Tables 3 and 6

AF-2543, W.P.A.

Expenditures for private assistance showed rather marked seasonal variations. In each of the years except 1932 a peak was reached in December, reflecting an expansion of activities during the Christmas season (fig. 14). Normally expenditures fell sharply from December to January and then showed a tendency, more pronounced in some years than in others, to decline, slightly at first and then more rapidly in the spring months, reaching a low point during the summer. Beginning in the fall expenditures increased to the winter peak. Expenditures for private

assistance were higher in January 1932 than in any succeeding month during the years 1932—1936 (table 3 and fig. 14).

The lowest amount reported during the period was for July 1936. Expenditures in December 1936 were the lowest for this month in any of the 5 years.

Case Loads

Relatively few families and single persons in rural and town areas received help through private agencies. The estimated average monthly case load was only 59,900 in 1932 (table 4). The average monthly load rose to 64,800 in 1933 but fell to 43,200 in 1934. It increased to 49,700 in 1935 and then declined to the 1934 level in 1936.

Year to year changes in the average monthly number of cases receiving private assistance were in the same direction as changes in the average monthly expenditure, but the rates of change for cases varied considerably from those for expenditures (table 10). In general, however, the 5-year trend in the number of cases receiving assistance was similar to the trend in expenditures (fig. 14).

Table 10.—Percent Change From Preceding Year in Monthly Number of Cases Receiving Private Assistance and in Monthly Expenditures for Private Assistance, 1933—1936

Year	Percent change from preceding year	
	Average monthly case load	Average monthly expenditures
1933	+8.2	+16.0
1934	-33.3	-42.3
1935	+15.0	+10.0
1936	-14.1	-15.5

Source: Tables 1 and 4.

The number of cases receiving private assistance was highest in January 1933 and lowest in July 1936. In January 1932, when expenditures were highest, the monthly case load was the second highest during the 5-year period. The smallest number of cases occurred in the same month and year as the smallest amount of expenditures.

Chapter III

AVERAGE MONTHLY BENEFITS PER CASE

AVERAGE MONTHLY benefits per case, derived by dividing total expenditures for a given type of assistance during the month by the total number of cases receiving assistance during the month, vary widely by type of assistance and within the same type from year to year and even from month to month. They are importantly affected by the varying amounts available for relief, by the length of the relief period within the month, by differences in standards of assistance, by the rate of relief turnover, and by the changing characteristics and needs of the case loads.

It is obvious that the extent of the need represented in the case load and the financial ability to meet that need affect the size of average monthly expenditures per case. The important influences exerted by other factors, however, are not so generally recognized.

Closings of cases during the month for reinvestigation, or because of transfer to other agencies, or because employment was thought available reduced the average monthly amount of relief as recorded here; openings or reopenings of relief cases during the month had the same effect. Since average monthly benefits per case were obtained by dividing the total expenditures in a given month by the total number of cases aided at any time during the month, the computed monthly averages underrepresent somewhat the average monthly benefits received by cases on relief throughout the month. This is particularly true during periods of wholesale transfer from one agency to another, such as the period of the Civil Works Administration in 1933 and 1934 and during the inauguration of the Works Program in 1935. Similarly, since expenditures frequently included small amounts of supplementary relief granted to cases with other sources of income, the average understates the amounts granted to cases entirely dependent on relief. The number of

days or pay periods during the month also affects the average from one month to another.[1]

A further factor that caused general relief grants to rise from 1933 to 1935 was the geographic shift in the case load. Areas with low relief benefits were much more important proportionately in the total case load in 1933 and the early part of 1934 than they were subsequently. This shift toward areas granting high relief benefits had the direct effect of raising total average benefits per case.

PUBLIC GENERAL ASSISTANCE

Average monthly benefits[2] per case for public general assistance in rural and town areas were consistently low throughout the 5-year period (fig. 15). During 1932 the average monthly benefit ranged from about $11.50 in some months to as little as $8.50 in others. In 1933 average monthly expenditures per case were only $9.50 with average expenditures of less than $10.00 reported for every month except October and November (table 11 and appendix table 42).

Table 11.—Average Monthly Benefit per Case in Rural and Town Sample Areas, by Type of Assistance, 1932—1936

Type of assistance	1932	1933	1934	1935	1936
Public general assistance	$10.00	$9.50	$14.10	$16.20	$12.50
Public veterans' assistance	22.10	19.50	19.40	20.90	22.80
Public aid to the aged	19.80	15.90	12.90	12.70	15.10
Public aid to the blind	18.50	18.60	19.30	17.90	18.90
Public aid to dependent children	17.00	16.60	16.60	17.10	17.50
Resettlement emergency grants	—	—	—	[1]19.20	16.80
Private assistance	3.10	3.30	2.80	2.70	2.70

[1]Based on expenditures in November and December only; the Resettlement emergency grant program was not initiated until November 1935.

Although Federal Emergency Relief Administration funds were available beginning in the latter part of May 1933, the average monthly benefit per case for public general assistance did not rise appreciably until 1934 when it increased to $14.10, approximately 41 percent and 48 percent, respectively, above the levels prevailing in 1932 and 1933. In 1934 average monthly benefits per case were less than $11 only in January, February, and March while they exceeded $12 in the remaining months of the year (appendix table 42). These differences were due to large-scale transfers of cases to general relief, as the Civil Works Administration decreased employment during the first quarter of 1934, and to the fact that the FERA provided direct relief grants almost entirely during this period; whereas in April 1934, following the demobilization of the CWA, the FERA initiated

[1]A more detailed analysis of factors influencing size of monthly relief benefits is in preparation.

[2]In the form of cash, relief in kind (except surplus commodities), relief orders, and requisitions.

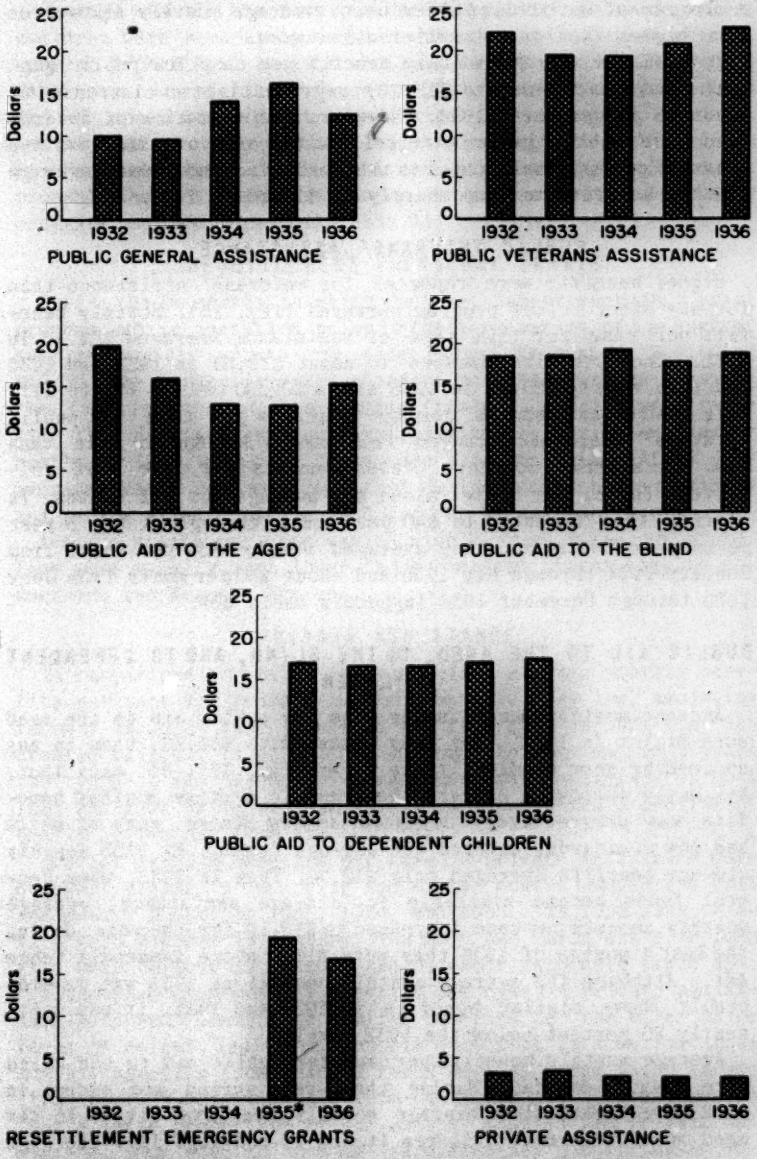

FIG 15 - AVERAGE MONTHLY BENEFIT PER CASE IN RURAL AND TOWN SAMPLE AREAS, BY TYPE OF ASSISTANCE 1932 - 1936

*Based on expenditures in November and December only; the Resettlement emergency grant program was not initiated until November 1935.

Source: Table II.

AF - 2563, W.P.A.

a program of work relief under which average monthly allowances were higher than direct relief allowances.

In 1935 the average monthly benefit per case for public general assistance rose to $16.20, representing an increase of about 15 percent over 1934. However, the cessation of Federal funds for public general relief at the end of 1935 and the transfer of employable cases to the Works Program caused average monthly benefits to drop sharply to $12.50 in 1936.

PUBLIC VETERANS' ASSISTANCE

Higher benefits were reported for veterans' assistance than for any other relief program surveyed (fig. 15). Monthly benefits per case for this type of assistance averaged $22.10 in 1932. Such benefits dropped to about $19.50 in 1933 and 1934 and then rose to $20.90 in 1935 and to $22.80 in 1936 (table 11).

In individual months average benefits per case for public veterans' assistance ranged from about $18.60 to more than $24. In several Southern States amounts per case were relatively large, and these raised the average for all States. In Florida they amounted to $40 per month throughout the 5-year period; in Louisiana they averaged nearly $30 per month from January 1934 through May 1935 and about $60 per month from June 1935 through December 1936 (appendix table 43).

PUBLIC AID TO THE AGED, TO THE BLIND, AND TO DEPENDENT CHILDREN

Average monthly benefits per case for public aid to the aged were higher in 1932, when they amounted to $19.80, than in any succeeding year studied (table 11 and fig. 15). Not only that, but in the following 3 years the trend in average monthly benefits was progressively downward as new States, many of which had low standards, entered the old-age field. By 1935 monthly old-age benefits averaged only $12.70. Then in 1936, when Federal funds became available for old-age assistance, average monthly amounts per case increased to $15.10 for the year; during the last 4 months of 1936 they were $16 or above (appendix table 44). Although the average monthly benefit in 1936 was considerably above similar benefits in 1934 and 1935, it was still nearly 25 percent below the 1932 level.

Average monthly benefits per case for public aid to the blind were fairly constant during the 5-year period and except in 1932 were higher than average monthly benefits either to the aged or to dependent children (table 11 and fig. 15). The high point was 1934 when such benefits averaged $19.30. For individual months the highest average grants for the entire period, slightly more than $21, were reported in November and December 1936 (appendix table 45).

Average monthly benefits per case for public aid to dependent children were remarkably constant throughout the 5-year period, ranging from $16.60 in 1933 and 1934 to $17.50 in 1936. During September, November, and December 1936, however, they averaged $18 or more, the highest level since January 1932. Federal legislation providing funds for aid to dependent children in States with plans approved by the Social Security Board was probably the most important factor in the rise in average monthly benefits in 1936 (appendix table 46).

RESETTLEMENT EMERGENCY GRANTS

During the 14 months in which the Resettlement emergency grant program was in operation prior to the termination of the survey, average monthly grants per case ranged from about $14.60 to $19.50. The largest average benefits per case were paid during the first months of the program (table 11 and appendix table 47). They declined rather sharply during the spring and summer months of 1936, when case loads were also declining. After July average grants rose as a result of the increasing needs of winter and as the effects of the 1936 drought became more acute.

Average grants per case varied widely from State to State. They were usually much lower in the Southern States than in the Northern and Western States.

PRIVATE ASSISTANCE

In comparison with other types of relief average monthly benefits per case for private assistance were very low, amounting to only $3.10 in 1932 (table 11 and fig. 15). In 1933 they increased slightly to $3.30, but during the succeeding 3 years the trend in monthly benefits was downward, the average in both 1935 and 1936 being only $2.70. This represented a decline of nearly 18 percent from the 1933 peak.

Average monthly benefits per case for private assistance were somewhat higher in the spring and summer months than in the fall and winter months in 1933, 1934, and 1935. In 1932 such benefits were highest in January, February, and March while in 1936 they were highest in October and December (appendix table 48).

Although average monthly benefits per case for private assistance were much lower than similar benefits for the other major forms of relief, individual reports show that in some instances monthly benefits from private funds were as large as, or larger than, monthly benefits paid from public funds. It is probable that a large proportion of the amounts granted for private assistance was used to provide supplementary aid for cases receiving other types of relief.

[1] Does not include veterans' assistance in New York as this type of aid was not reported separately from general assistance; also does not include veterans' assistance in South Carolina where this type of aid was reported on an annual basis only.

[2] Minimum duplication in the count of cases receiving more than 1 type of assistance from the same agency. Duplication in the count of cases receiving relief from more than 1 agency is not eliminated.

[3] Legislation providing aid to the aged not effective in Arkansas prior to April 1935.

[4] Eliminates duplication in the count of cases receiving more than 1 type of assistance from the same agency. Duplication in the count of cases receiving relief from more than 1 agency is not eliminated.

[1]Reports were not obtained for 1932 and 1933.
[2]The number of cases receiving veterans' assistance and the amount expended for this type of aid are relatively small.
[3]Resettlement emergency grant program initiated November 1935.
[4]Legislation providing aid to the aged not effective in Illinois prior to January 1936.

[1]Legislation providing aid to the aged not effective in Indiana prior to January 1934.

[2]Eliminates duplication in the count of cases receiving more than 1 type of assistance from the same agency. Duplication in the count of cases receiving relief from more than 1 agency is not eliminated.

[3]Legislation providing aid to the aged not effective in Iowa prior to November 1934.

[4]Eliminates duplication in the count of cases receiving more than 1 type of assistance from the same agency. Duplication in the count of cases receiving relief from more than 1 agency is not eliminated.

[1]The number of cases receiving veterans' assistance and the amount expended for this type of aid are relatively small.

[2]Resettlement emergency grant program initiated November 1935.

[3]Legislation providing aid to the aged became effective in Nebraska in August 1935; it was declared unconstitutional in September 1935. New legislation was enacted in November 1935, but no payments were made until February 1936.

[1] Legislation providing aid to the blind was effective in North Carolina from February 1936 through June 1936.

[2] Eliminates duplication in the count of cases receiving more than 1 type of assistance from the same agency. Duplication in the count of cases receiving relief from more than 1 agency is not eliminated.

[3] Legislation providing aid to the blind not effective in North Dakota prior to March 1935.

[2] Eliminates duplication in the count of cases receiving more than 1 type of assistance from the same agency. Duplication in the count of cases receiving relief from more than 1 agency is not eliminated.

[1] Legislation providing aid to the aged not effective in Ohio prior to November 1933.

[2] Elimination duplication in the count of cases receiving more than 1 type of assistance from the same agency. Duplication in the count of cases receiving relief from more than 1 agency is not eliminated.

[1]Average not computed for fewer than 50 cases.

[2]Exclusive of South Carolina as data were available on an annual basis only.

[3]Exclusive of New York as public veterans' assistance was not reported separately from public general assistance.

[4]Reports were not obtained for Kentucky, Louisiana, and Oklahoma for 1932 and 1933.

†Average not computed for fewer than 50 cases.

[1]Georgia, Kansas, North Carolina, South Carolina, Tennessee, and Virginia did not have legislation providing aid to the aged. Florida, Kentucky, South Dakota, and West Virginia, having averages computed for fewer than 6 months, were arbitrarily omitted. No data are presented for 1932 and 1933 because of the small number of States reporting aid to the aged in those years.

[2]Legislation providing aid to the aged not effective in Alabama prior to January 1936.

[3]Legislation providing aid to the aged not effective in Arkansas prior to April 1935.

[4]Reports were not obtained for Colorado for 1934.

[5]Legislation providing aid to the aged not effective in Connecticut prior to April 1936.

[6]Legislation providing aid to the aged not effective in Illinois prior to January 1936.

[7]Legislation providing aid to the aged not effective in Iowa prior to November 1934.

[8]Legislation providing aid to the aged not effective in Louisiana prior to June 1936.

†Average not computed for fewer than 50 cases.

[1]Georgia and South Carolina did not have legislation providing aid to dependent children. Arkansas, Kansas, Kentucky, Missouri, North Dakota, Tennessee, Texas, and West Virginia had legislation providing assistance but did not make any expenditures. Connecticut, Louisiana, Massachusetts, Mississippi, North Carolina, and Virginia assisted fewer than 50 cases monthly or, having averages computed for less than 6 months, were arbitrarily excluded.

[2]Legislation providing aid to dependent children not effective in Alabama prior to September 1935.

[3]Reports were not obtained for New York for 1932, for Illinois, Minnesota, Oklahoma, and Washington for 1932 and 1933, and for Colorado for 1932, 1933, and 1934.

†Average not computed for fewer than 50 cases.

[1]No private assistance was reported in Connecticut, Alabama, Colorado, Massachusetts, Missouri, Montana, and New York, having averages computed for less than 7 months, were arbitrarily excluded.

[2]Reports were not obtained for Illinois, Kansas, Kentucky, Louisiana, Minnesota, Oklahoma, South Carolina, and Washington for 1932 and 1933.

Appendix B

85086 O—38——10

METHODOLOGY OF RURAL AND TOWN REPORTING SERIES

THE STUDY of public and private assistance in rural and town areas was initiated by the Division of Social Research, Works Progress Administration, in January 1936. Its purpose was to provide on a sampling basis current information concerning (a) intensity, (b) cost, (c) types, and (d) trends of assistance in rural areas and towns up to 25,000 population.

When the study was initiated, it was decided to obtain information not only on general relief but also on other forms of relief as well in order to make possible the presentation of the total picture of public and private assistance. During the period that the Federal Emergency Relief Administration was making grants for relief on a broad scale (May 1933—December 1935), the great bulk of relief was general unemployment relief. After the passage of the Social Security Act on August 14, 1935, many States prepared to transfer large numbers of cases to the Social Security program when Federal funds became available for this program in February 1936. It was obviously desirable to include statistics of assistance granted under this program. Also, in November 1935 the Resettlement Administration had inaugurated a program of emergency grants to farmers, and in a number of States, especially those in drought areas, this type of assistance bulked large.[1] Private assistance, although always limited, was a further means of providing aid which needed to be included in a comprehensive survey. Special public assistance to veterans was likewise included. Public assistance through earnings under the Civil Works Administration and the Works Progress Administration and loans to clients of the Resettlement Administration were not considered relief and were omitted from the survey.

[1] Since the study was initiated, the Social Security Board has established a reporting system which secures statistics on aid to the aged, to the blind, and to dependent children and on public general relief. The Resettlement Administration compiles summary reports on the emergency grant program.

[3] Except Essex, East Lyme, and Harwinton.
[4] Except Pendleton.

During 1936 reports were obtained monthly for five major types of assistance: public general assistance, public veterans' assistance, public aid to the aged, to the blind, and to dependent children, Resettlement emergency grants, and private assistance. In addition to information for 1936 reports were obtained for each month of the years 1932 through 1935. For each month of 1935 it was possible to obtain reports for all of the 385 sample areas reporting in 1936, but for 1934, 1933, and 1932 reports were obtained for only 374, 270, and 225 sample areas, respectively (table A).

THE SAMPLE

The sample for this study consisted of all relief cases residing in 322 counties in 34 States, selected to represent

counties having no city of 25,000 or more inhabitants in 1930, and in 63 townships in Connecticut and Massachusetts, selected to represent New England townships with less than 5,000 population (fig. A and list A). With few exceptions the sample counties and townships chosen for purposes of this study were those used in the Survey of Current Changes in the Rural Relief Population, initiated by the Division of Social Research in February 1935 and carried through December 1935.[2] There were two principal reasons for using the sample areas selected for the Survey of Current Changes in the Rural Relief Population: (1) With certain adjustments the original sample areas could be considered representative for purposes of the new study, and (2) there already existed in each of the States included in the reporting series a competent research staff, cooperating with the Division of Social Research in rural relief studies. The existence of this staff with its trained field workers made it possible to initiate the current reporting series and to collect data for the period 1932—1935 with a minimum of effort and delay.

The original sample was revised to assure representation of towns up to 25,000 population and to eliminate counties containing cities of 25,000 population or more. These revisions were needed because the original sample which covered only rural areas and towns up to 5,000 population included some counties with cities of more than 25,000 population. In order to give more complete coverage the original sample was expanded to include sample areas from three additional States—Illinois, Indiana, and Mississippi. In making adjustments in State samples and in selecting sample areas for the three additional States, the original method of selecting counties was followed.

METHOD OF SELECTING SAMPLE COUNTIES

The sample counties were selected by controlled rather than random sampling. Their selection by this method was possible because much information about factors related to rural relief was already available as a basis for classifying counties into relatively homogeneous groups from which the sample counties could be selected. Factors used in classifying the counties were percent of the rural population classified as rural-farm in 1930 and percent of farm tenancy (or percent of farm labor in the States where this factor was more important than tenancy). According to their rank on these two factors the counties were divided into subgroups, each subgroup containing approximately 10 percent of all counties in a given State. On the basis of

[2] See Mangus, A. R., "Methodology of Rural Current Change Studies" in Asch, Berta and Mangus, *Farmers on Relief and Rehabilitation*, Research Monograph VIII, Division of Social Research, Works Progress Administration, Washington, D. C., 1937, pp. 189-202.

representativeness with respect to type of farming, type of nonagricultural industry, and intensity of relief, one or more counties were selected from each subgroup. The resultant group of counties was designated as the State sample. Sample townships selected by competent local research students in Connecticut and Massachusetts were accepted as representative of the rural relief situation in those States.[3]

REPRESENTATIVENESS OF SAMPLE

Tests showed that the sample counties were representative not only of type of farming, farm tenancy, farm labor, rural-farm population, type of nonagricultural industry, and intensity of relief in each State but also of other related factors. For example, they were found to be highly representative in most States with respect to part-time farming during 1934 and the movement of population to farms between 1930 and 1935. In addition, various statistical checks based on the *Unemployment Relief Census, October 1933* indicated that the sample counties were typical with respect to aggregate numbers of rural relief cases and the average size of case.[4] These indications of general representativeness give increased confidence in the reliability of the sample for purposes of relief reporting.

As official statistics of the Federal Emergency Relief Administration were reported on a county basis, it was possible to test the accuracy with which general relief case loads in 1935 could be estimated by States from the sample counties, assuming equal distribution of the relief and of the general population within and without the sample counties. Table B compares for each of the reporting States the relative size of the sample with respect to the general population in 1930 and its relative size with respect to the general relief population in February, April, and June, 1935.

As a general average for all States[5] sampled, the sample counties contained 13.0 percent of the total rural and town population in 1930 of all counties represented; they contained 13.4 percent of the relief population in February 1935 and 13.2 percent in April and June 1935 (table B). This high degree of correspondence between percentages indicates the accuracy with which the number of cases receiving general relief could have been estimated from the sample counties and is further evidence of their representativeness. Since the State samples were found to be representative of the intensity of general relief as well as of basic rural factors, it was reasonable to assume that

they were fairly representative of the various factors involved in the reporting series.

COLLECTION OF DATA

Two schedules were drawn up for purposes of the reporting series: DRS-160, an inventory schedule, and DRS-162, a monthly report form (see exhibits A and B). Form DRS-160 was designed to obtain a list of all public and private agencies extending

assistance in the sample counties as of January 1936 and also of all agencies that had operated at any time between January 1930 and January 1936. In addition this form provided for the information necessary in determining whether agencies listed on the schedule should be included in the reporting series. Form DRS-162 was designed for monthly reports of the number of families and single persons assisted and the amount of obligations incurred, classified by type of assistance.

Reports on the number of cases receiving relief and the amount of relief during each month from 1932 through 1936 were obtained directly from the records of public and private relief agencies operating in the sample areas during this period. The reports were prepared in each State by field staffs working under the immediate supervision of the Assistant State Supervisor of Rural Research. Every possible care was taken to insure accurate reporting of data, and the schedules were edited in the office of the State Supervisor of Rural Research before being forwarded to Washington for tabulation.

When reports were received by the Washington Office, they were re-edited prior to being tabulated. Each report was carefully checked for inconsistent, erroneous, or missing entries. All incorrect reports were returned to the State Supervisor of Rural Research for correction when entries could not be checked on the basis of other sections of the schedule. As a result substantially complete reports were received from all operating agencies in the counties sampled.

PUBLICATION OF CURRENT STATISTICS

Current statistics of relief have an immediate value in meeting the administrative demand for information concerning the rural relief situation. To be of greatest value, therefore, such information has to be made available as soon as possible after the close of the month for which the statistics are reported. Also, statistics of relief for a particular month are more readily understood if they are interpreted in terms of change from preceding months.

For 1936 figures on relief in the rural and town sample areas were released in the form of bimonthly comparisons,[6] being based on strictly comparable data. During the year reports were received monthly from approximately 1,500 public and private agencies. Since it was seldom possible to obtain reports by a given date from all agencies participating in the reporting series,

[6] Data for 1936 and for the first 6 months of 1937 were published by the Division of Social Research, Works Progress Administration, in *Current Statistics of Relief in Rural and Town Areas*. The reporting series was transferred to the Division of Public Assistance Statistics of the Social Security Board on July 1, 1937, and current statistics of assistance in rural and town areas will be issued hereafter by that agency.

it was necessary to tabulate data for a particular month before complete coverage was available. Bimonthly comparisons were, therefore, made up on the basis of identical agencies reporting for the current month and for the preceding month.

The procedure used for including and excluding agency reports in a particular bimonthly comparison was as follows:

1. Reports of regularly reporting agencies that discontinued operations at the end of a particular month, July, for example, were included in the bimonthly comparison for July—August, zero entries being made for August.
2. First reports of newly organized agencies were included for the current month of a given bimonthly comparison. For example, reports for agencies beginning operations in July were included in the bimonthly comparison for June—July, zero entries being made for June.
3. Reports for regularly reporting agencies were excluded from both months of a particular bimonthly comparison when reports were not available for one or the other of the months.

CONSTRUCTION OF INDICES

1932—1936 Period

In order to facilitate comparisons of the data monthly indices were constructed for each of the major forms of relief expenditures in rural and town areas for the years 1932—1936. The procedure was as follows:

1. The rural and town population of the United States in 1930 was determined by combining the population of all counties that contained no town of 25,000 population or more and the population of all New England townships with less than 5,000 population.
2. The percent of the total rural and town population of the United States in 1930 contained in the rural and town sample areas reporting in each of the 5 years, 1932—1936, was computed.
3. For each form of relief the proportion that the rural and town population in the sample areas reporting in a particular year constituted of the total rural and town population of the United States was calculated, and this proportion was used as a weighting factor to raise the reported expenditures for relief each month of the particular year to an estimated United States total for rural and town areas.

4. For each type of relief and for the aggregate of all types average monthly estimated expenditures for the year July 1935—June 1936 were selected as the base and represented 100. This base period was selected because it represented neither the maximum nor the minimum 12-month expenditures. The period started near the 5-year peak month and ranged down to a point not far above the 5-year minimum month.
5. For each type of relief estimated monthly expenditures were divided by the average estimated monthly expenditures in the base period to obtain the monthly indices.
6. Monthly indices for total estimated expenditures were obtained by dividing the aggregate of estimated monthly expenditures of all types by the average estimated aggregate monthly expenditures in the base period.

Monthly indices of the number of cases receiving each type of relief were constructed by the method outlined for indices of expenditures.

Current Series

Current monthly indices of expenditures for each of the major forms of relief—public general assistance, public veterans' assistance,[7] public aid to the aged, to the blind, and to dependent children, Resettlement emergency grants, and private assistance—as published in *Current Statistics of Relief in Rural and Town Areas* were constructed from incomplete data in order to avoid delay in publication due to late reports from the field. A different method of computing index numbers was utilized from that for the 1932—1936 period since the current indices were computed from month to month on the basis of the data immediately available.

The procedure in constructing current indices for each type of relief was as follows: the average for July 1935—June 1936 was also selected as the base period and expressed as 100. Expenditures made by agencies reporting in the current month were expressed as a percentage of expenditures made by these same agencies in the preceding month. The resulting percentage, or link relative, was applied to the index of the preceding month to obtain the index for the current month.

---

[7] Public general assistance and veterans' assistance were combined in order to make the rural-town series comparable with the urban series. See Winslow, Emma A., *Trends in Different Types of Public and Private Relief in Urban Areas, 1929—35*, Publication 237, U. S. Department of Labor, Children's Bureau, Washington, D. C., 1937.
